EDUCATION

Shanghai University (*University of 211 Project*) Shang Hai, CHINA

Master of Mechatronic Engineering *2018.09-2021.04*

Advisor: Prof. Linyong Shen, Prof. Zhen Zhang; GPA: 3.89/4.0

Course: Programming with MATLAB, C++ primer, Programming with Python, Machine learning

Huaqiao University Xia Men, CHINA

Bachelor of Mechanical Engineering *2014.09-2018.07*

Academic Advisor: Prof. Tingping Lei, Prof. Xiaomei Cai; GPA: 4.3/5.0 (Top 2%)

Xiamen University (*University of 985 Project*) Xia Men, CHINA

PhD. Candidate in Mechatronic Engineering (***QUIT***) *2021.09-2022.12*

Reason of quitting the PhD: Lab's research does not align with my personal career paths.

COMPETITION

- The National Scholarship (2016-2017) (Top 2% of Department)
- Excellent Student in Science and Engineering (2015-2016) (Top 1% of Department)
- First Class Scholarship of the University (2015-2016) (Top 5% of Department)
- First Class Academic Scholarship (2018-2019, 2019-2020, 2020-2021) (Top 5% of Department)

RESEARCH EXPERIENCE

- As **Reviewer** for *Journal of Intelligent & Robotic Systems*, *ACS Applied Materials & Interfaces*, *Sensors and Actuators A*, *Journal of Materials Chemistry A*;

* ***Shanghai University***

Graduate Student (Supervisor: Prof. Linyong Shen)

- Developed an optimization model on real-time hand prediction based on sEMG signals
- Provided a solution to improve the reliability, cost-efficiency and real-time recognition performance in Myo-electric multi-DOFs prosthetic application
- Bio-signal acquisition system development & relevant experiment design and conducting

* ***Huaqiao University***

Research Assistant (Advisor: Prof. Tingping Lei)

- Designed the electrospinning experiment to figure out the roles of solution jet and other governing parameters played
- Utilized gap electrospinning technique we achieved in producing meter-long aligned nanofibers
- Conducted experiments in separating oil/water mixtures using self-made mental mesh coated with specific materials
- Proposed an innovative 3D conversion model and realized in separation the mixtures

* ***Xiamen University***

PhD Candidate (Quit, to 2022.12)

- Proposed a positive design strategy with hyperelastic model for developing sensitivity tuned flexible pressure sensor
- Fabricated prototype sensor verified its ultra-low sensitivity error on targeted requirement over 200 kPa
- Applied the proposed sensor in physiological signal recognition via machine learning
- Lead a research group for developing the high temperature-resistant flexible sensor array for aerospace application
- Conducted experiments on developing ultrahigh temperature-resistance flexible sensor based on EGaIn composites

SKILLS AND INTERESTS

Language: College English Test-6; Chinese (native); IELTS (as soon as possible)

Programming and others: Python, MATLAB, C/ C++ (basic); Origin, Solidworks, AutoCAD.

Interests: Long race (half marathon, PR 2.5h), badminton, coding
